Replacement Instructions
G-Coupler Mouth Piece

1. 

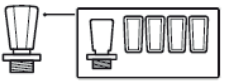

Depress the trigger to reveal the 4 jaws.

2. 

Use pliers to grip the tip and turn anti-clockwise to loosen tip. You can also grip the jaws in a vice.

3. 

Remove the tip and 4 steel jaws from the coupler.

4. 

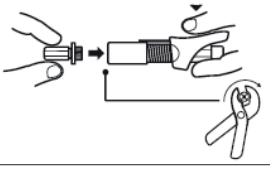

Assemble the 4 new jaws around the new tip.

5. 

The short end of each of the 4 new jaws should fit into the retaining groove just above the thread on the new tip.

6. 

Ensure the 4 new jaws are spaced evenly around the new tip.

7. 

Depress trigger then hold the 4 new jaws tightly around the new tip with your fingers, insert into the end of the coupler body and tighten with pliers.

WARNING
To prevent damage, do not over-tighten the tip. Max tightening torque 6 (N.m).

NOTE
For langest service life, replace damaged Zerk before use.
